ENEOS to Support Sustainable Operations at Yokohama Marathon 2026 Through Supply of 100% Synthetic Diesel Fuel for Generators

ENEOS Corporation ("ENEOS") announced today that it will supply 100% synthetic diesel fuel for generators used at the Yokohama Marathon 2026, which will be held on October 25, 2026.

Yokohama Marathon 2026 is one of Japan's leading participatory sporting events, attracting approximately 30,000 runners as well as many other visitors. As an Official Partner of the event, ENEOS has continuously supported the Yokohama Marathon over the years. Yokohama is one of ENEOS's key business locations and is home to the Company's Negishi Refinery, Yokohama Plant, Central Technical Research Laboratory, and Yokohama Tsurumi Lubricants Park.

The 100% synthetic diesel fuel to be supplied for this event was produced at the demonstration plant constructed within ENEOS's Central Technical Research Laboratory with support from the Green Innovation Fund Project of the New Energy and Industrial Technology Development Organization (NEDO). The fuel will be used to power generators operated at the event venue, contributing to environmentally conscious event management.

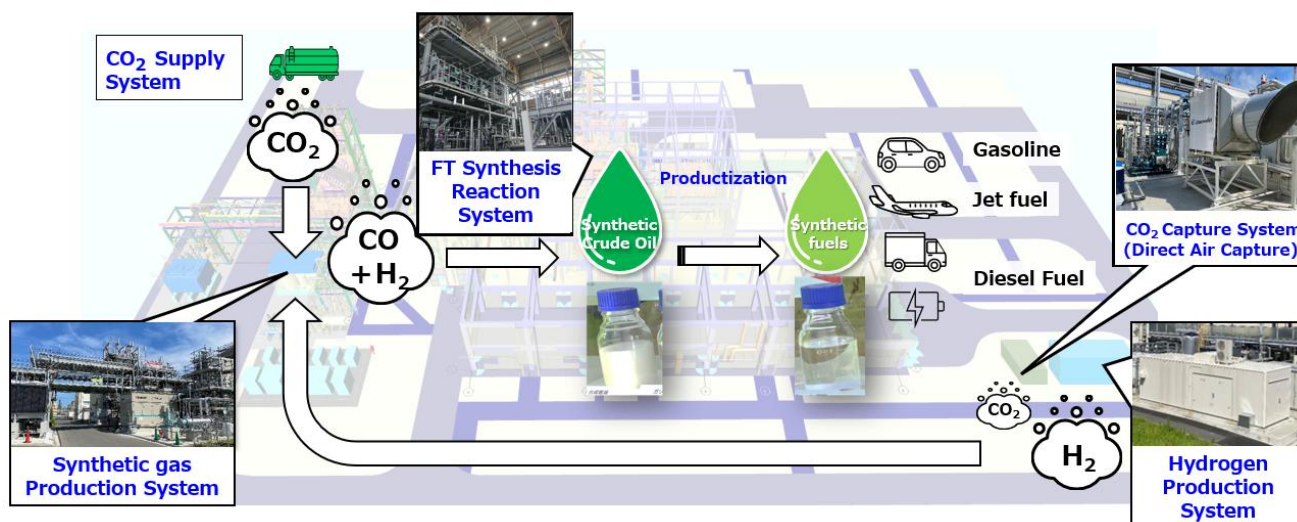

ENEOS is promoting the commercialization and adoption of next-generation fuels, including biofuels such as Sustainable Aviation Fuel (SAF) and synthetic fuels, while striving to achieve both a stable supply of energy and materials and the realization of a carbon-neutral society. This initiative at the Yokohama Marathon supports event operations that prioritize sustainability and decarbonization, while also creating a new use case for synthetic fuels. In addition, by utilizing synthetic fuel in the event operations, ENEOS aims to raise awareness among runners and visitors of the potential for next-generation fuels to support society as a reliable energy source.

ENEOS will continue to contribute to the realization of a carbon-neutral society through the technological development and social implementation of next-generation fuels, thereby helping to build a sustainable society.

<About YOKOHAMA MARATHON 2026>

The Yokohama Marathon is one of Japan's premier participatory sporting events, involving approximately 30,000 runners and 6,000 volunteers. The event aims to provide an enjoyable experience for all participants through running, spectating, and supporting, while contributing to the promotion of sports and health, as well as generating economic and city-branding benefits. Under the "Yokohama Marathon Green Action" initiative, the event promotes sustainable operations through efforts such as bottle-to-bottle recycling of used PET bottles and resource recycling of paper cups.

Date: October 25, 2026 (Sunday)

Organizer: Yokohama Marathon Organizing Committee

(Yokohama City, Kanagawa Prefecture, Yokohama Sports Association, and others)

Events:

- Full Marathon (42.195 km)
- Pair Relay [1st runner (approx. 22.7km), 2nd runner (approx. 19.5km)]
- Wangan Highway Run (approx. 20.3 km)
- Minato Mirai 7 km Run (approx. 7 km)
- Enjoy Run (Wheelchair, Family, Middle school students) (approx. 3 km)
